

# LITTER IN AMERICA

Results from the nation's largest litter study

## KEY FINDINGS: SOURCES OF LITTER

Keep America Beautiful's 2009 National Visible Litter Survey and Litter Cost Study\* identifies individuals as the primary source of litter. Motorists and pedestrians are littering on roads and highways, in downtown business districts, recreational areas, and beaches.

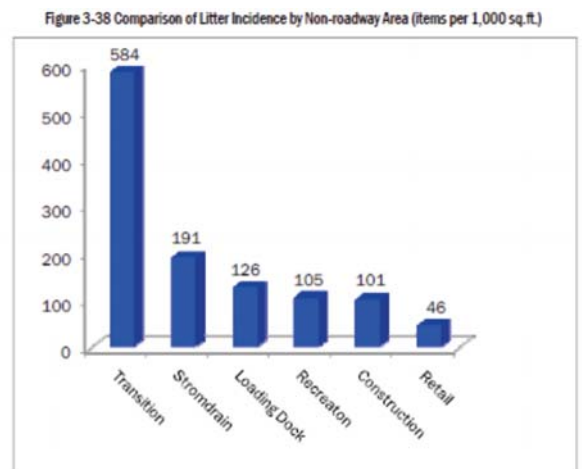

### LITTER ON ROADS AND HIGHWAYS IS THE RESULT OF INDIVIDUAL ACTIONS.

- Motorists and pedestrians contribute a combined nearly 70% of litter over 4 inches. Along roadways and highways, motorists generate 52.2% of litter and pedestrians 17.5%.
- Motorists not properly securing truck or cargo loads, including collection vehicles, represent 20.7% of roadway litter 4 inches-plus. Vehicle debris and improperly secured containers, dumpsters, trash cans or residential waste/recycling bins represent another 8.1% of litter over 4 inches.

### ALONG U.S. ROADWAYS CIGARETTE BUTTS, DISCARDED IMPROPERLY BY MOTORISTS AND PEDESTRIANS, ARE THE MOST FREQUENTLY IDENTIFIED ITEM.

- Tobacco products comprise roughly 38% of ALL U.S. roadway litter in overall aggregate analysis. Paper (22%) and plastic (19%) are the next largest percentages of litter on roads and highways.
- Packaging litter comprises nearly 46% of litter 4 inches and greater. This includes fast food, snack, tobacco, and other product packaging. And 61% of beverage containers 4 inches or greater on U.S. roadways are soft drink and beer containers.

# LITTER IN AMERICA

Results from the nation's largest litter study

## OFF THE ROADS, MOST LITTER IS IMPROPERLY DISCARDED AT "TRANSITION POINTS."

- About 95% of litter at transition points is from pedestrians. These are areas where individuals consuming a food or tobacco product are required to discard the product before entering.
- Virtually all litter—97%—found at transition areas are small items. Confection litter (candy, chocolate, gum, etc.) is the most predominant at 53.7%, and tobacco products second at 29.8%.

## STORM DRAINS, LOADING DOCKS, RECREATION AREAS, CONSTRUCTION SITES, AND RETAIL DISTRICTS ARE ALSO AREAS WHERE LITTER COLLECTS—MOSTLY SMALLER ITEMS LIKE CIGARETTE BUTTS, CONFECTION, AND PAPER.

- **After transition points, storm drains are the most littered.** Cigarette butts, confection, and other litter accumulate in or around storm drains, located primarily in gutters and designed to drain excess rain from paved streets, parking lots, etc.
- **85% of litter at loading docks is from workers loading and unloading goods.** Areas behind retail and other businesses are littered predominantly with cigarette butts, but also metals, plastic, and paper.
- **People litter both large and small items at recreational areas.** The source of most litter at parks, beaches, and open areas where people congregate for leisure activities is pedestrians—98.5%. Small items, which represent about half the litter, are cigarette butts and confection, while larger litter is most commonly food-related.
- **The primary source of litter at active residential and commercial construction sites is workers (69%).** They improperly dispose of trash from snacks, meals, smoking, etc. Most construction site litter is smaller items (93%), including cigarette butts, small pieces of paper, plastic, and confection.
- **High-traffic locations are a draw for a variety of items littered by shoppers.** Strip malls, shopping centers, and convenience stores all attract packaging litter, cigarette butts, and confection.
